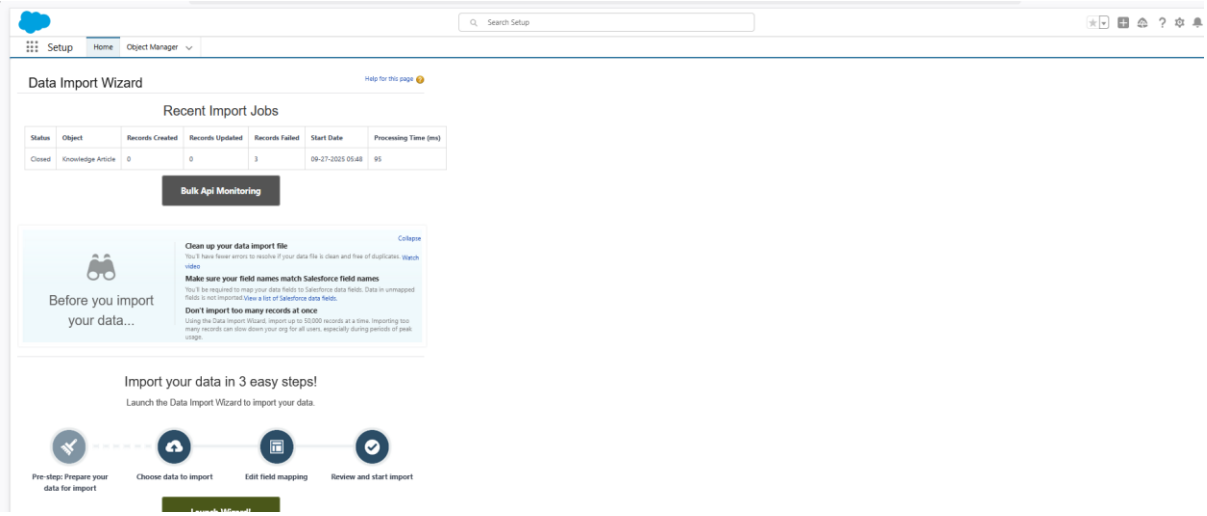
Phase 8

Data Import

Wizard — Knowledge Articles Summary

1. **Purpose:**
    - To bulk **add new Knowledge Article records** into Salesforce without manually creating each record.
2. **Tool Used:**
    - **Salesforce Data Import Wizard** — a user-friendly, browser-based interface for importing standard or custom objects.
3. **Object Targeted:**
    - **Knowledge Articles** (custom object) — stores articles with fields like Title, Category, Tags, Content, Status, View Count, and Last Updated.
4. **Operation Performed:**
    - Selected **"Add new records"** to insert multiple articles at once.
5. **Data Source:**
    - Uploaded a **CSV file** (articles.csv) containing all article details.
6. **Fields Included in CSV:**
    - Name/Title — article title
    - Category__c — category lookup
    - Tags__c — associated tags (via junction object)
    - Content__c — article content/body
    - Status__c — published/draft status
    - View_Count__c — initial view count
    - Last_Updated__c — date/time field for last update
7. **Outcome:**
    - Successfully **imported multiple Knowledge Articles** into Salesforce, ready to be used in the Knowledge Hub app and for reporting, search, or email digest flows.
8. **Advantages:**

- Saves time compared to manual entry
- Maintains data consistency
- Supports bulk creation of related records (like Category and Tags)



Data Preparation:

- Created CSV files containing columns: Name, Category__c, Tags__c, Content__c, Status__c, View_Count__c.
- Ensured data consistency and proper formatting before import.

Data Import Options:

- **Data Import Wizard:**
  - Uploaded CSV file.
  - Mapped CSV columns to Salesforce fields.
  - Reviewed mapping and started import.
  - Monitored import job status (success, errors, warnings).
- **Data Loader / SFDX CLI:**
  - Used Data Loader or sfdx force:data:tree:import for bulk insertion.
  - Inserted multiple Knowledge Articles at once for faster deployment.

Deployment to Other Orgs:

- Used **Salesforce DX** or **Metadata Deployment** to move components (Objects, Fields, Flows, LWC, Apex Classes) from Dev to Sandbox/Production.
- Ensured all dependent metadata (custom objects, tabs, permission sets, flows, LWCs) were included.

Post-Deployment Validation:

- Verified that **Knowledge Articles** appear correctly in the Lightning App.
- Checked flows, page layouts, and LWC search functionality.
- Confirmed correct field visibility and sharing rules.

Advantages:

- Automates bulk data population and environment setup.
- Reduces manual errors and ensures consistency across orgs.
- Enables smooth testing, staging, and production deployment.
