# Phase 4

**Flow – Knowledge Article**

**Auto-Update Last_Updated__c Field – Knowledge Articles**

**Goal: Automatically update the Last_Updated__c field whenever a Knowledge Article is created or updated, but only when it is Published or the content changes.**

**Configuration Steps**

1. **Navigate to Setup → Flow → New Flow → Record-Triggered Flow.**
2. **Select Object: Knowledge_Article__c.**
3. **Configure Trigger:**
    - **Trigger After Insert and After Update.**
4. **Set Condition Requirements:**
    - **Status__c = Published**
    - **OR Content__c Is Changed = True (optional for content-only updates)**
5. **Click Done.**
6. **Add Update Records Element:**
    - **Label: Update Last Updated**
    - **How to Find Records: Use the record that triggered the flow**
    - **Field to Update: Last_Updated__c = $Flow.CurrentDateTime**
7. **Connect Start → Update Records → End.**
8. **Save the flow as Auto_Update_Last_Updated and Activate.**

**Outcome**

- **The Last_Updated__c field is automatically refreshed whenever an article is created or updated under the specified conditions.**
- **Ensures accurate tracking of the most recent changes to published articles.**

- 

An **Autolaunched Flow** was created to automate processes for Knowledge Articles.

**Flow Details**

- **Flow Label:** Knowledge Article
- **API Name:** Knowledge_Article_c
- **Type:** Autolaunched Flow
- **Trigger:** Record—Run After Save
- **Active Version:** 1
- **Created By:** Saloni Nandurkar, 21 Sept 2025, 1:45 AM
- **Last Modified By:** Saloni Nandurkar, 21 Sept 2025, 2:31 PM
- **Flow Builder Version:** 64.0
- **Environment:** Default
- **URL:** /flow/Knowledge_Article_c

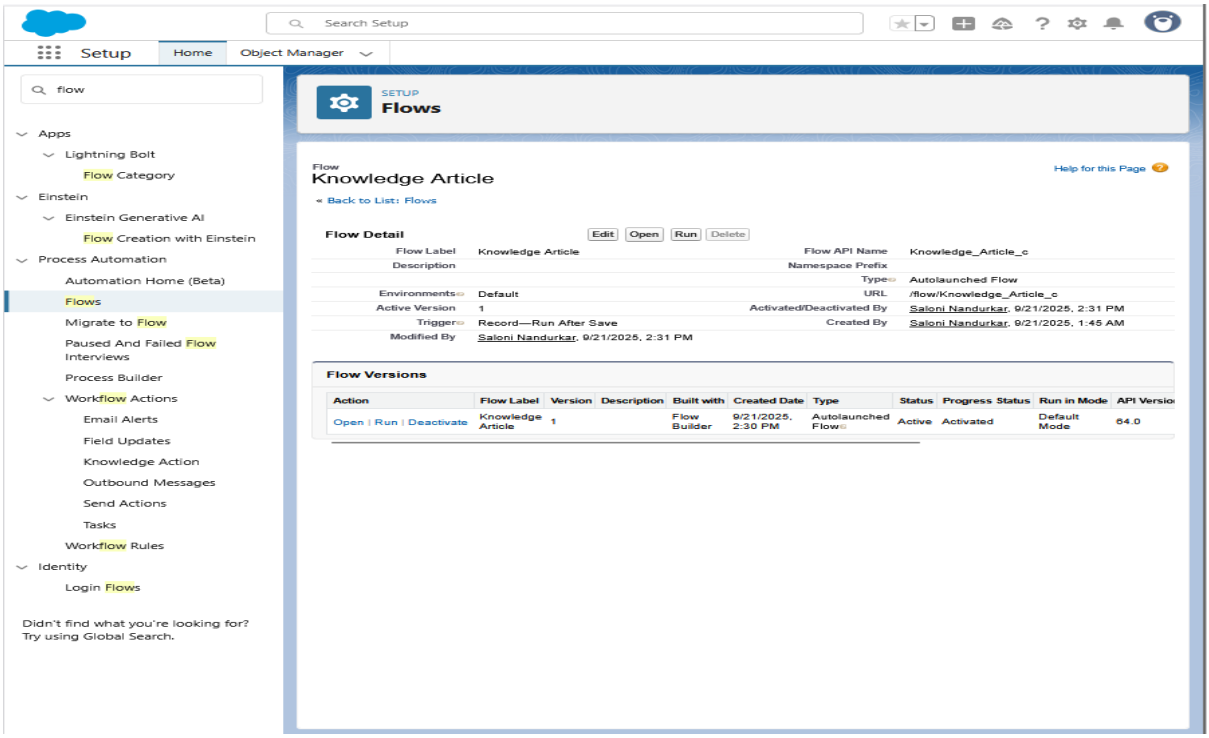
**Purpose**

- Automates actions on Knowledge Articles, such as updating fields or performing logic after a record is saved.
- Ensures consistency and reduces manual updates.

**Outcome**

- Flow is **active** and runs after a Knowledge Article is created or updated.Forms part of the automation for **auto-updating the Last_Updated__c field** and other article-

related processes.



**Weekly Digest Flow – Knowledge Articles**

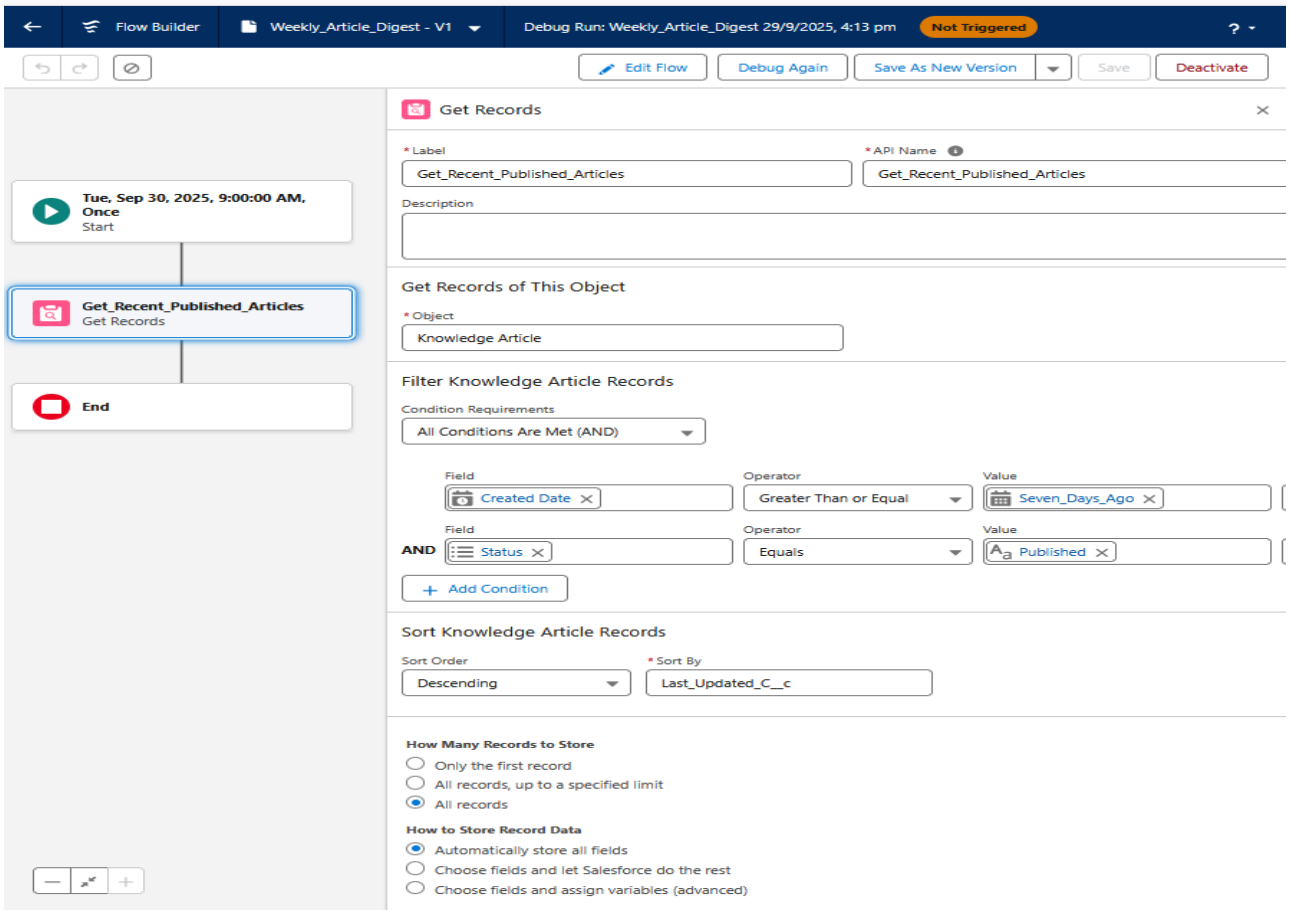
**Goal:** Automatically send a weekly email listing all Knowledge Articles created or updated in the last 7 days that are **Published**.

**Configuration Steps**

1. Navigate to **Setup → Flow → New Flow → Scheduled-Triggered Flow**.
2. **Set Object:** Knowledge_Article__c.
3. **Set Schedule:**
    - Frequency: Weekly
    - Start Date: Next Monday (or chosen day)
    - Time: 9:00 AM (or preferred time)
4. **Add Get Records Element:**
    - Object: Knowledge_Article__c
    - Filter:
        - CreatedDate = Last 7 Days OR
        - Last_Updated__c = Last 7 Days
        - AND Status__c = Published

- Sort: Optional (e.g., by Last_Updated__c descending)

5. **Loop through Records (optional):**
   - Build a text variable (Article_List) concatenating article titles and links.
6. **Send Email Action:**
   - Recipient: Distribution list or selected users
   - Subject: Weekly Knowledge Hub Digest
   - Body: Include Article_List or format as an HTML table for readability.
7. Connect elements: **Start → Get Records → Loop (optional) → Send Email → End**.
8. Save flow as **Weekly_Article_Digest** and **Activate**.

**Outcome**


- Users receive an automated weekly email digest of newly created or updated published Knowledge Articles.
